Introducing the 10-year Breast Implant Follow-up Studies (BIFS)

When the Food and Drug Administration (FDA) approved Allergan's silicone gel-filled breast implants, it not only affirmed their safety and effectiveness, it provided new options to women nationwide — options that have been available to women in nearly 60 countries for more than 25 years. In collaboration with the FDA, Allergan, Inc. has initiated a large-scale, post-approval study to supplement the vast collection of data that already exists based on extensive clinical studies, as well as the experiences of approximately one million women worldwide.

The Breast Implant Follow-Up Studies (BIFS) program is designed to evaluate specific questions related to silicone breast implants and to provide a real-world assessment of certain health outcomes, such as questions related to successful lactation and potential long-term local complications. As a patient considering surgery with saline-filled or silicone gel-filled breast implants, you have the unique opportunity to participate in this program, and receive compensation for your involvement, including a \$10 payment for each milestone questionnaire completed; a \$100 gift certificate towards an in-office aesthetic procedure*; and the opportunity to enter a drawing for a chance to win a prize valued at \$10,000**.

*Applies to silicone participants only following their in-office visits at one, four and 10 years post-surgery

**For official contest rules, visit www.bifs.us

Allergan is committed to enhancing the lives of patients like you. By sponsoring the BIFS program, we're adding even more valuable data to the already existing literature that supports the science behind INAMED® Silicone-Filled Breast Implants.

Talk with your surgeon today to learn more about the BIFS program and about how you can be part of this landmark endeavor.
